SKILLS

Languages: Java, C, JavaScript

Frontend: React, HTML, CSS, Bootstrap

Backend: Spring Boot, Spring Security, Spring Data JPA, REST APIs

Database: MySQL

Cybersecurity: Vulnerability Assessment, Web Security, Burp Suite, OWASP Methodology

Core Concepts: OOPs, Data Structures & Algorithms, System Design Basics

PROJECTS

Smart Expense Splitter (SplitEase) | *Spring Boot, Spring Security, JPA, MySQL, Thymeleaf, Bootstrap*

- Built and deployed a full-stack expense-splitting web app supporting group creation, shared expense tracking, and automatic equal/custom-split cost calculation across multiple users.
- Implemented secure authentication with Spring Security and BCrypt password hashing, covering registration, login, and role-protected routes.
- Designed a debt-simplification algorithm that reduces multi-party balances to a minimal set of settle-up transactions, replacing $O(n^2)$ pairwise debts with a streamlined one-click settle-up flow.
- Modeled a normalized relational schema across 5 entities (User, Group, GroupMember, Expense, ExpenseSplit) with JPA/Hibernate on MySQL, and deployed the application on Render with a TiDB Cloud-hosted database.

Online Exam System | *Spring Boot, Spring Security, JWT, JPA, MySQL*

- Built a full-stack backend for an online exam platform, implementing secure user registration with BCrypt password hashing and stateless JWT-based authentication.
- Designed role-based access control (ADMIN vs STUDENT) with Spring Security, enforcing endpoint-level authorization and record-level ownership checks across REST APIs.
- Developed a centralized global exception handler and CORS-enabled configuration, returning clean JSON error responses and externalizing secrets via environment-based configuration.

INTERNSHIPS & TRAININGS

42 Learns

Cyber Security Intern

2024

- Completed a 4-week hands-on cybersecurity internship, practicing ethical hacking techniques including SQL Injection, OS Command Injection, and Cross-Site Scripting (XSS) across guided lab exercises.
- Explored real-world attack vectors including Brute Force attacks, Server-Side Request Forgery (SSRF), and OS backdoor creation, building practical understanding of exploitation techniques and mitigations.

Codetantra

Competitive Coding Using Python Trainee

2025

- Solved 100+ competitive programming problems in Python spanning arrays, strings, recursion, and core data structures during a 4-week structured coding program.
- Strengthened algorithmic problem-solving and logical reasoning through consistent practice on coding challenges and timed assessments.

ACHIEVEMENTS

Smart India Hackathon – Shortlisted

- Selected as part of a shortlisted team in the Smart India Hackathon, a nationwide innovation competition, for proposing a technology-driven solution to a real-world problem statement.

EDUCATION

Pace Institute of Technology and Sciences

Ongole, India

B.Tech in Electronics and Communication Engineering; CGPA: 7.3

2022 – 2026

Sri Chaitanya Junior College

Ongole, India

Intermediate; 75%

2020 – 2022

ZPH School, Kanuparthi

Andhra Pradesh, India

SSC; 91%

2020
